

# ANTACID DRUG SUPPORT

## By HEALTHCARE SUPPLEMENTS® Drug Nutrient Support™

Support for nutritional depletion caused by antacid drugs such as: **Nexium®**, **Prilosec®**, **Prevacid®**, **Aciphex®**, **Protonix®**, **Zantac®**, **Tagamet®**, **Pepcid®**, **Axid®**, and aluminum containing antacids

- Allows the patient to get the treatment they need while minimizing the risks and curtails avoidable side effects
- When medications unknowingly deplete the body of essential nutrients this can then in turn create more health problems
- A milligram of prevention is worth a kilogram of cure
- These drugs deplete B12, Folic Acid, Vitamin D, Zinc, and Calcium
- Supports energy and optimal health function
- Folic acid depletion can cause some serious health problems, especially women. Folic acid deficiency can cause anemia, birth defects, cervical dysplasia, elevated homocysteine, headache, fatigue, depression, hair loss, anorexia, insomnia, diarrhea, nausea, and increased infections. Folic acid deficiency is also associated with an increased risk for developing breast cancer and colorectal cancer.
- Vitamin B12 depletion can cause anemia, which results in fatigue, tiredness and weakness. B12 deficiency is a common cause of depression, especially in the elderly. Offsets mental fatigue and confusion associated with B12 deficiency. Other irregularities that may occur include: tongue and mouth problems and skin sensitivity.
- Zinc is a mineral important to the immune system. Zinc deficiency can cause slow healing of wounds, insulin resistance, a loss of the senses of taste and smell, and infertility and sexual dysfunction in both men and women.
- Vitamin D depletion can result in skeletal problems such as osteoporosis as well as muscle weakness, tooth decay, and hearing loss. Vitamin D is involved in blood pressure regulation.
- Problems associated with calcium loss include osteoporosis, heart and blood pressure irregularities.
