

# Dendrobium Orchid

**Light:** Bright light. In the home, an east, west or lightly shaded south window. Leaves should be medium olive-green color.

**Care:** Keep evenly moist while in active growth. Allow to dry between waterings after growth is mature. Dendrobiums like 50-60% humidity and may be placed on trays over moistened pebbles. A good general rule of fertilizing is to apply a balanced (10-10-10, 12-12-12 or similar) fertilizer “weakly, weekly”. Meaning fertilize each week at 1/4-1/2 the recommended dilution during active growth.
