

# Ivy Topiary

Light: Bright, indirect light

Care: Keep soil evenly moist, but not wet. If your topiary is body planted (not in a pot) submerge entire topiary in a deep sink or bucket of water until bubbles cease. Repeat when topiary feels light. Misting will keep humidity levels high and maintain the lush green color of the moss. Prune to encourage bushiness and retain shape.

Inside temperature: 40-70 degrees Fahrenheit
