

Maidenhair Fern

Light: Bright indirect light even tolerating a little direct early morning sun.

Care: Keep evenly moist all year and from September to March feed with liquid fertilizer every two weeks. Maintain stable temperatures and humidity levels. Maidenhairs do not like being moved as this sets them back until they can adjust to the new set of conditions. Provide humidity indoors by standing the pots on top of pebble filled trays or saucers, keep the saucers filled with water to just below the bottom of the pot. Do not allow roots to sit in standing water.
